

AMENDMENTS TO THE CLAIMS

1 1. (Currently amended) A method of generating a plurality of custom catalogs from
2 a database comprising catalog data, said method comprising:

3 executing a search of the database for each of a plurality of rule sets, each of the rule sets
4 specifying constraints that define a scope of the catalog data comprising one of
5 the custom catalogs, and each of the rule sets uniquely identified by a rule set
6 identifier, said executing a search performed in accordance with constraints
7 specified by the rule set and returning a set of search results in the form of a
8 subset of the catalog data having the scope defined by the constraints;~~and~~

9 associating each set of search results with the identifier of the rule set used to generate
10 them; and

11 responding to a database query, the query specifying constraints defining a scope of the
12 catalog data and being associated with a rule set identifier, wherein said

13 responding further comprises:

14 executing a search of the database in accordance with the query constraints, the

15 search returning a set of query results in the form of a subset of the catalog

16 data having the scope defined by the query constraints; and

17 generating a response to the query that comprises a pared subset of the catalog

18 data that forms the intersection between the set of query results and the set

19 of search results associated with the same rule set identifier as associated

20 with the query.

1 2. Cancelled.

1 3. (Currently amended) The method of Claim [2] 1 further comprising receiving the
2 query from a browser over the Internet.

1 4. (Original) The method of Claim 3 wherein said generating a response to the
2 query further comprises:

3 formatting the pared subset of catalog data as one or more web pages; and

transmitting the web pages over the Internet for display on the browser.

5. (Original) The method of Claim 1 wherein the catalog data represents a plurality of items, the catalog data for each of the items comprising a unique item identifier, one or more attributes, a unique value for each of the attributes, and associated descriptive information.

6. (Original) The method of claim 5 wherein each set of search results comprises none, one or more item identifiers, and wherein said associating further comprises: for each set of search results, creating an entry in a subset table for each instance of the one or more item identifiers in the set; and storing in each entry the item identifier and the identifier of the rule set used to constrain the search that generated the set.

7. (Original) The method of Claim 6 further comprising responding to a database query, the query specifying constraints defining a scope of the catalog data and being associated with a rule set identifier, said responding further comprising: executing a search of the database in accordance with the query constraints, the search returning a set of query results in the form of a subset of the catalog data having the scope defined by the query constraints, the query results comprising none, one or more item identifiers; creating a query results table having an entry for each item identifier in the set of query results, each entry storing the item identifier with the rule set identifier associated with the query; performing a table join between the query results table and the subset table and returning a pared subset comprising all item identifiers that have identical entries in both tables; and generating a response to the query that includes descriptive information associated with each of the item identifiers included in the pared subset.

1 8. (Original) The method of Claim 1 further comprising storing each of one or
2 more sets of search results in a different catalog subset table, each catalog subset table associated
3 with the identifier of the rule set constraining the search used to generate the set of results stored
4 therein.

1 9. (Original) The method of Claim 8 wherein the catalog data represents a
2 plurality of items, the catalog data for each of the items comprising a unique item identifier, one
3 or more attributes, a unique value for each of the attributes, and associated descriptive
4 information.

1 10. (Original) The method of Claim 9 wherein each of the catalog subset tables
2 comprises one or more item identifiers for each of the items included in the set of search results
3 stored in each table, said method further comprising for each catalog subset table, extracting the
4 catalog data for each of the item identifiers stored therein to create a custom catalog file.

1 11. (Original) The method of Claim 10 further comprising:
2 formatting one or more copies of the custom catalog files; and
3 exporting each formatted copy to an entity associated with the same identifier as the
4 identifier associated with the rule set constraining the search used to generate the
5 search results used to extract the catalog data comprising the formatted copy to be
6 exported.

1 12. (Original) The method of Claim 1 further comprising:
2 locking the database so that no modifications can be made to the database during said
3 executing searches.
4 creating a read-only copy of the database; and
5 wherein said executing a search is performed on the read-only copy of the database.

1 13. (Original) The method of Claim 12 wherein said creating a read only copy of
2 the database further comprises converting the database from format that facilitates database
3 maintenance to a read-only version of the database having a format that facilitates searches.

1 14. (Original) The method of Claim 1 wherein said executing a search further
2 comprises:
3 translating the rule sets to database queries;
4 issuing the database queries to a database server coupled to the database; and
5 wherein the database server executes the searches of the database in accordance with the
6 database queries.

1 15. (Original) The method of Claim 14 wherein said converting the rule sets to
2 database queries is performed by an application program being executed on an application
3 server.

1 16. (Original) The method of Claim 1 wherein the rule sets comprise one or more
2 rules, each of the rules specifying an include or an exclude function in conjunction with one or
3 more item attribute pairs.

1 17. (Original) The method of Claim 1 further comprising establishing the
2 plurality of rule sets using a browser interface to an application program being executed on an
3 application server.

1 18. (Currently amended) An apparatus for generating a plurality of custom catalogs
2 from a database comprising catalog data, said apparatus comprising:
3 means for executing a search of the database for each of a plurality of rule sets, each of
4 the rule sets specifying constraints that define a scope of the catalog data
5 comprising one of the custom catalogs, and each of the rule sets uniquely
6 identified by a rule set identifier, said executing a search performed in accordance
7 with constraints specified by the rule set and returning a set of search results in
8 the form of a subset of the catalog data having the scope defined by the
9 constraints; ~~and~~
10 means for associating each set of search results with the identifier of the rule set used to
11 generate them; and

12 means for responding to a database query, the query specifying constraints defining a
13 scope of the catalog data and being associated with a rule set identifier, said
14 means for responding further comprising:
15 means for executing a search of the database in accordance with the query
16 constraints, the search returning a set of query results in the form of a
17 subset of the catalog data having the scope defined by the query
18 constraints; and
19 means for generating a response to the query that comprises a pared subset of the
20 catalog data that forms the intersection between the set of query results
21 and the set of search results associated with the same rule set identifier as
22 associated with the query.

1 19. Cancelled.

1 20. (Currently amended) The apparatus of Claim [19] 18 further comprising
2 receiving the query from a browser over the Internet.

1 21. (Original) The apparatus of Claim 20 wherein said means for generating a
2 response to the query further comprises:

3 means for formatting the pared subset of catalog data as one or more web pages; and
4 means for transmitting the web pages over the Internet for display on the browser.

1 22. (Original) The apparatus of Claim 18 wherein the catalog data represents a
2 plurality of items, the catalog data for each of the items comprising a unique item identifier, one
3 or more attributes, a unique value for each of the attributes, and associated descriptive
4 information.

1 23. (Original) The apparatus of claim 22 wherein each set of search results
2 comprises none, one or more identifiers, and wherein said means for associating further
3 comprises:

4 means for creating for each set of search results an entry in a subset table for each
5 instance of the one or more item identifiers in the set; and

6 means for storing in each entry the item identifier and the identifier of the rule set used to
7 constrain the search that generated the set, for each set of search results.

1 24. (Original) The apparatus of Claim 23 further comprising means for
2 responding to a database query, the query specifying constraints defining a scope of the catalog
3 data and being associated with a rule set identifier, said means for responding further
4 comprising:

5 means for executing a search of the database in accordance with the query constraints, the
6 search returning a set of query results in the form of a subset of the catalog data
7 having the scope defined by the query constraints, the query results comprising
8 none, one or more item identifiers;

9 means for creating a query results table having an entry for each item identifier in the set
10 of query results, each entry storing the item identifier with the same rule set
11 identifier as associated with the query;

12 means for performing a table join between the query results table and the subset table and
13 returning a pared subset comprising all item identifiers that have identical entries
14 in both tables; and

15 means for generating a response to the query that includes descriptive information
16 associated with each of the item identifiers included in the pared subset.

1 25. (Original) The apparatus of Claim 18 further comprising means for storing
2 each of one or more sets of search results in a different catalog subset table, each catalog subset
3 table associated with the identifier of the rule set constraining the search used to generate the set
4 of results stored therein.

1 26. (Original) The apparatus of Claim 25 wherein the catalog data represents a
2 plurality of items, the catalog data for each of the items comprising a unique item identifier, one
3 or more attributes, a unique value for each of the attributes, and associated descriptive
4 information.

1 27. (Original) The apparatus of Claim 26 wherein each of the catalog subset
2 tables comprises one or more item identifiers for each of the items included in the set of search

3 results stored in each table, said apparatus further comprising, means for extracting for each
4 catalog subset table the catalog data for each of the item identifiers stored therein to create a
5 custom catalog file.

1 28. (Original) The apparatus of Claim 27 further comprising:
2 means for formatting one or more copies of the custom catalog files; and
3 means for exporting each formatted copy to an entity associated with the same identifier
4 as the identifier associated with the rule set constraining the search used to
5 generate the search results used to extract the catalog data comprising the
6 formatted copy to be exported.

1 29. (Original) The apparatus of Claim 18 further comprising:
2 means for locking the database so that no modifications can be made to the database
3 during said executing searches.
4 means for creating a read-only copy of the database; and
5 wherein said means for executing searches operates on the read-only copy of the
6 database.

1 30. (Original) The apparatus of Claim 19 wherein said means for creating a read
2 only copy of the database further comprises means for converting the database from format that
3 facilitates database maintenance to a read-only version of the database having a format that
4 facilitates searches.

1 31. (Original) The apparatus of Claim 18 wherein said means for executing a
2 search further comprises:
3 means for translating the rule sets to database queries;
4 means for issuing the database queries to a database server coupled to the database; and
5 wherein the database server executes the searches of the database in accordance with the
6 database queries.

1 32. (Original) The apparatus of Claim 31 wherein said means for converting the
2 rule sets to database queries is performed by an application program being executed on an
3 application server.

1 33. (Original) The apparatus of Claim 18 wherein the rule sets comprise one or
2 more rules, each of the rules specifying an include or an exclude function in conjunction with
3 one or more item attribute pairs.

1 34. (Original) The apparatus of Claim 18 further comprising means for
2 establishing the plurality of rule sets using a browser interface to an application program being
3 executed on an application server.

1 35. (Currently amended) A computer program product for generating a plurality of
2 custom catalogs from a database comprising catalog data, said computer program product
3 comprising:

4 a computer-readable storage medium; and

5 program instructions stored on said storage medium for:

6 executing a search of the database for each of a plurality of rule sets, each of the

7 rule sets specifying constraints that define a scope of the catalog data

8 comprising one of the custom catalogs, and each of the rule sets uniquely

9 identified by a rule set identifier, said executing a search performed in

10 accordance with constraints specified by the rule set and returning a set of

11 search results in the form of a subset of the catalog data having the scope

12 defined by the constraints; and

13 associating each set of search results with the identifier of the rule set used to

14 generate them;

15 responding to a database query, the query specifying constraints defining a scope

16 of the catalog data and being associated with rule set identifier;

17 executing a search of the database in accordance with the query constraints, the

18 search returning a set of query results in the form of a subset of the catalog

19 data having the scope defined by the query constraints; and

20 generating a response to the query that comprises a pared subset of the catalog
21 data that forms the intersection between the set of query results and the set
22 of search results associated with the same rule set identifier as associated
23 with the query.

1 36. Cancelled.

1 37. (Currently amended) The computer program product of Claim [36] 35 wherein
2 said program instructions are further for receiving the query from a browser over the Internet.

1 38. (Original) The computer program product of Claim 37 wherein said program
2 instructions are further for:
3 formatting the pared subset of catalog data as one or more web pages; and
4 transmitting the web pages over the Internet for display on the browser.

1 39. (Original) The computer program product of Claim 35 wherein the catalog
2 data represents a plurality of items, the catalog data for each of the items comprising a unique
3 item identifier, one or more attributes, a unique value for each of the attributes, and associated
4 descriptive information.

1 40. (Original) The computer program product of claim 39 wherein each set of
2 search results comprises none, one or more item identifiers, wherein said program instructions
3 are further for:
4 for each set of search results,
5 creating an entry in a subset table for each instance of the one or more item identifiers in
6 the set; and
7 storing in each entry the item identifier and the identifier of the rule set used to constrain
8 the search that generated the set.

1 41. (Original) The computer program product of Claim 40 wherein said program
2 instructions are further for responding to a database query, the query specifying constraints

3 defining a scope of the catalog data and being associated with a rule set identifier, said program
4 instructions further for:

5 executing a search of the database in accordance with the query constraints, the search
6 returning a set of query results in the form of a subset of the catalog data having
7 the scope defined by the query constraints, the query results comprising none, one
8 or more item identifiers;

9 creating a query results table having an entry for each item identifier in the set of query
10 results, each entry storing the item identifier with the same rule set identifier as
11 associated with the query;

12 performing a table join between the query results table and the subset table and returning
13 a pared subset comprising all item identifiers that have identical entries in both
14 tables; and

15 generating a response to the query that includes descriptive information associated with
16 each of the item identifiers included in the pared subset.

1 42. (Original) The computer program product of Claim 35 wherein said program
2 instructions are further for storing each of one or more sets of search results in a different catalog
3 subset table, each catalog subset table associated with the identifier of the rule set constraining
4 the search used to generate the set of results stored therein.

1 43. (Original) The computer program product of Claim 42 wherein the catalog
2 data represents a plurality of items, the catalog data for each of the items comprising a unique
3 item identifier, one or more attributes, a unique value for each of the attributes, and associated
4 descriptive information.

1 44. (Original) The computer program product of Claim 43 wherein each of the
2 catalog subset tables comprises one or more item identifiers for each of the items included in the
3 set of search results stored in each table, and wherein said program instructions are further for:
4 extracting, for each catalog subset table, the catalog data for each of the item identifiers
5 stored therein to create a custom catalog file.

1 45. (Original) The computer program product of Claim 44 wherein said program
2 instructions are further for:

3 formatting one or more copies of the custom catalog files; and
4 exporting each formatted copy to an entity associated with the same identifier as the
5 identifier associated with the rule set constraining the search used to generate the
6 search results used to extract the catalog data comprising the formatted copy to be
7 exported.

1 46. (Original) The computer program product of Claim 35 wherein said program
2 instructions are further for:

3 locking the database so that no modifications can be made to the database during said
4 executing searches.
5 creating a read-only copy of the database; and
6 wherein said executing searches is performed on the read-only copy of the database.

1 47. (Original) The computer program product of Claim 46 wherein said program
2 instructions are further for converting the database from a format that facilitates database
3 maintenance to a read-only version of the database having a format that facilitates searches.

1 48. (Original) The computer program product of Claim 35 wherein said program
2 instructions are further for:

3 translating the rule sets to database queries;
4 issuing the database queries to a database server coupled to the database; and
5 wherein the database server executes the searches of the database in accordance with the
6 database queries.

1 49. (Original) The computer program product of Claim 48 wherein said program
2 instructions comprise an application program being executed on an application server.

1 50. (Original) The computer program product of Claim 35 wherein the rule sets
2 comprise one or more rules, each of the rules specifying an include or an exclude function in
3 conjunction with one or more item attribute pairs.

1 51. (Currently amended) A custom catalog generated from a database comprising
2 catalog data, said custom catalog generated by:
3 executing a search of the database for each of a plurality of rule sets, each of the rule sets
4 specifying constraints that define a scope of the catalog data comprising one of
5 the custom catalogs, and each of the rule sets uniquely identified by a rule set
6 identifier, said executing a search performed in accordance with constraints
7 specified by the rule set and returning a set of search results in the form of a
8 subset of the catalog data having the scope defined by the constraints; ~~and~~
9 associating the set of search results with the identifier of the rule set;
10 responding to a database query, the query specifying constraints defining a scope of the
11 catalog data and being associated with a rule set identifier;
12 executing a search of the database in accordance with the query constraints, the search
13 returning a set of query results in the form of a subset of the catalog data having
14 the scope defined by the query constraints; and
15 generating a response to the query that comprises a pared subset of the catalog data
16 forming the intersection between the set of query results and the set of search
17 results.

1 52. Cancelled.

1 53. (Currently amended) The custom catalog of Claim [52] 51 further generated by
2 receiving the query from a browser over the Internet.

1 54. (Original) The custom catalog of Claim 53 further generated by:
2 formatting the pared subset of catalog data as one or more web pages; and
3 transmitting the web pages over the Internet for display on the browser.

1 55. (Original) The custom catalog of Claim 51 wherein the catalog data
2 represents a plurality of items, the catalog data for each of the items comprising a unique
3 identifier, one or more attributes, a unique value for each of the attributes, and associated
4 descriptive information.

1 56. (Original) The custom catalog of claim 55 wherein the set of search results
2 comprises none, one or more item identifiers, and wherein said custom catalog is further
3 generated by:
4 creating an entry in a subset table for each instance of the one or more item identifiers in
5 the set; and
6 storing in each entry the item identifier and the identifier of the rule set.

1 57. (Original) The custom catalog of Claim 56 further generated by responding to
2 a database query, the query specifying constraints defining a scope of the catalog data and being
3 associated with a rule set identifier, said custom catalog further generated by:
4 executing a search of the database in accordance with the query constraints, the search
5 returning a set of query results in the form of a subset of the catalog data having
6 the scope defined by the query constraints, the query results comprising none, one
7 or more item identifiers;
8 creating a query results table having an entry for each item identifier in the set of query
9 results, each entry storing the item identifier with the rule set identifier associated
10 with the query;
11 performing a table join between the query results table and the subset table and returning
12 a pared subset comprising all item identifiers that have identical entries in both
13 tables; and
14 generating a response to the query that includes descriptive information associated with
15 each of the item identifiers included in the pared subset.

1 58. (Original) The custom catalog of Claim 51 further generated by storing the
2 set of search results in a catalog subset table, each catalog subset table associated with the
3 identifier.

1 59. (Original) The custom catalog of Claim 58 wherein the catalog data
2 represents a plurality of items, the catalog data for each of the items comprising a unique item
3 identifier, one or more attributes, a unique value for each of the attributes, and associated
4 descriptive information.

1 60. (Original) The custom catalog of Claim 59 wherein the catalog subset table
2 comprises one or more item identifiers for each of the items included in the set of search results
3 stored in the table, said custom catalog further generated by extracting the catalog data for each
4 of the item identifiers stored therein to create a custom catalog file.

1 61. (Original) The custom catalog of Claim 60 further generated by:
2 formatting one or more copies of the custom catalog file; and
3 exporting each formatted copy to an entity associated with the identifier of the rule set.

1 62. (Original) The custom catalog of Claim 51 further generated by:
2 locking the database so that no modifications can be made to the database during said
3 executing searches.
4 creating a read-only copy of the database; and
5 wherein said executing searches is performed on the read-only copy of the database.

1 63. (Original) The custom catalog of Claim 62 further generated by converting
2 the database from a format that facilitates database maintenance to a read-only version of the
3 database having a format that facilitates searches.

1 64. (Original) The custom catalog of Claim 51 further generated by:
2 translating the rule set to one or more database queries;
3 issuing the database queries to a database server coupled to the database; and
4 wherein the database server executes the search of the database in accordance with the
5 database queries.

1 65. (Original) The custom catalog of Claim 64 wherein said custom catalog is
2 generated by an application program being executed on an application server.

1 66. (Original) The custom catalog of Claim 51 wherein the rule sets comprise one
2 or more rules, each of the rules specifying an include or an exclude function in conjunction with
3 one or more item attribute pairs.

1 67. (Original) The custom catalog of Claim 51 further generated by using a
2 browser interface to an application program being executed on an application server to establish
3 a plurality of rule sets.

1 68. Cancelled.

1 69. Cancelled.

1 70. Cancelled.
